

CREATE AN ETHER WALLET TUTORIAL

1. Download and install an ether wallet.

You can download the current version of ether wallets here: [Ether Wallet Download](#). You can choose from versions for Linux (32bit and 64bit), Mac OS X and Windows (64bit). We choose the windows version and download it. You only have to unpack the file after the download. After that, the ether wallet can be used without installing it. You simply have to start the file "Ethereum-Wallet".

2. Create a new ether account

When you open the file "Ethereum-Wallet" for the first time, you have to fill in some details. In the first step, you choose "Main Network". Afterwards, you have the possibility to import a presale account. If you do not have one, you can skip this step. In the next step, you have to enter the password for your first ether account (ETHERBASE). After choosing your password, your ether wallet is synchronized. Due to the fast growing blockchain, it takes several hours when you start it for the first time. After that, the ether wallet opens with the account details.

You can create a new Ether account in the account details by clicking on "add account". You simply have to choose a password. Theoretically, your ether account could be hacked by criminals, as your ether account is saved on your computer. Criminals can only access your ether, if they know your password. This is why it is so important to choose a secure password.

3. Sending and receiving ether

It is so easy! In order to receive ether, you have to give the sender your ether address. Click in the ether account you want to use to receive ether.

Your ether address is saved in the cache if you click on “copy address”. Press Strg+V at the same time on your keyboard, in order to fill in your ether address in the required place. If you want to send ether, click on “send” on the top bar. If you have several accounts, you can choose which account to use in the field “from”. Fill in the recipient address in the field “to”. The amount is shown in Ether. If you want to send the entire amount of ether of the chosen account, tick the box “send all”. You can choose the charged fee with the regulator in “choose fee”. The amount of fee influences the speed of the transfer. We set the regulator in the middle. Therefore, we pay a fee of approx. 1 Cent per transfer at the moment. Click on “send” and verify the transfer with your password.
